Art Unit: 1725

The inventions are distinct, each from the other because of the following reasons:

Inventions are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions (i) device for cleaning a wire, (ii) device for coating a wire, (iii) method of coating a wire, (iv) method of cleaning a wire, (v) device for processing a wire, (vi) device for processing a wire, (vii) wire cleaning device, (viii) power source, and (ix) device for processing a wire.

Because these inventions are distinct for the reasons given above and the search required for one of the Groups is not required for one of the other Groups, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
